REMBRANDT® Gene amplification ISH detection assay

Amplifications of specific genes are often associated with malignancies. The REMBRANDT® Gene amplification detection assays are able to detect and localize genetic amplifications within patient samples.

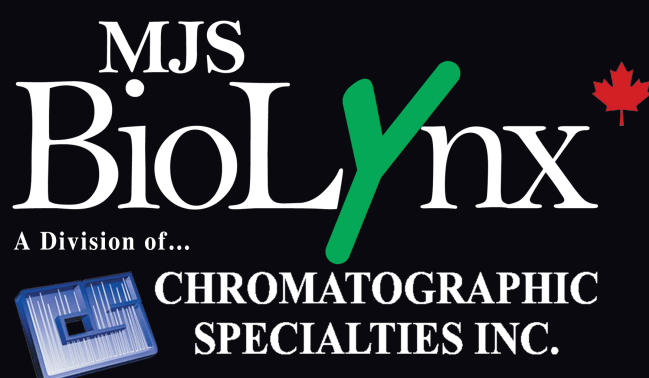

The REMBRANDT® Gene amplification detection assays are available for the detection of:

- HER2 gene amplifications, associated with i.e. breast malignancies
- MDM2 gene amplifications, associated with i.e. liposarcoma
- EGFR gene amplifications, associated with i.e. lung cancer
- SOX2 and TERC amplifications, associated with i.e. lung cancer or cervical cancer

GENE AMPLIFICATIONS; COMPLETE KITS

CAT NR.

- REMBRANDT® TERC amplification FISH detection assay C814K.2030.YY**
- REMBRANDT® LSI 3q26.2/CEP3 ISH detection assay C814K.0199.YY**
- REMBRANDT® SOX2 amplification FISH detection assay C815K.2030.YY**
- REMBRANDT® LSI 3q26.33/CEP3 ISH detection assay C815K.0199.YY**
- REMBRANDT® EGFR amplification FISH detection assay C816K.2030.YY**
- REMBRANDT® LSI 7p11.2/CEP7 ISH detection assay C816K.0199.YY**
- REMBRANDT® MDM2 amplification FISH detection assay **Bestseller!** C817K.2030.YY**
- REMBRANDT® LSI12q15/CEP12 ISH detection assay C817K.0199.YY**
- REMBRANDT® HER2 amplification FISH detection assay **Bestseller!** C801K.5206 (20T)**
- REMBRANDT® LSI17q12/CEP17 ISH detection assay C801K.0199.YY**

*All products are also available as stand-alone RUO products

**Available in 5 or 10 tests
